

# PRODUCT STRUCTURE

## PVC Mix aluminum surface

Anti-scratched/Real texture/Easy to clean

## Stone Plastic Core

Heat resistant/waterproof/ corrosion resistant/environmental protection

## Aluminum Bottom Foil

Insulate/ keep warm/prevent mildew

## Strong PE Foam Tape

Strong stickiness/Never peeling/ More environmentally friendly

## Peeling film

self-adhesive/DIY

# User Manual

- 1 Start by cleaning your wall to make it clean. Afterward, wait for the wall to dry. Note that the product is not suitable for use on damp surfaces

- 2 Begin by removing the transparent protective film from the front of the tile. Next, peel back the adhesive backing on the backside, leaving approximately 2 inches exposed.

- 3 Stick it parallel and then peel off the remaining backing.

- 4 If your tile has the label 'Overlap here' please align the grout lines of the tiles and overlap them during the bonding process.

If your tile does not have the 'Overlap here' label, please do not overlap the grout lines. Align their borders directly during the pasting process

- 5 Trim away the excess and unwanted portions, and you're done!

- They can be installed on any surface whose temperature does not exceed 49 °C (120 °F). Avoid any direct contact with a heat source or direct exposure to an open flame.
- Once tiles have completely adhered to the surface -generally after 48 hours - they are resistant to the humidity of bathrooms and water splash. However, it is highly inadvisable to install them in the shower.
