PRODUCT STRUCTURE
# REGULAR THICKNESS≈1.0-1.2mm

① **PET transparent protective film**

PET transparent protective film provides comprehensive protection for the surface of printed products while maintaining clarity and attractiveness.

② **3D PU gel**

The elasticity and softness of 3D PU gel allow it to form three-dimensional patterns and layers, adding depth and tactile appeal to printed materials.

③ **PET printing layer**

Ensure that the printed images are clear, colors are vibrant, and details are rich.

④ **Aluminium film**

Aluminum film is typically moisture-resistant, effectively preventing the penetration of water. This is crucial for protecting the product from the impact of humid environments, preventing mold, and corrosion.

⑤ **Backing paper**

The primary purpose of backing paper is to protect the adhesive until the product is ready to be used. It prevents the adhesive from sticking to unwanted surfaces or getting contaminated before application.

PRODUCT STRUCTURE
THICKER THICKNESS ≈2.2-2.4mm

① PET transparent protective film

PET transparent protective film provides comprehensive protection for the surface of printed products while maintaining clarity and attractiveness.

② 3D PU gel

The elasticity and softness of 3D PU gel allow it to form three-dimensional patterns and layers, adding depth and tactile appeal to printed materials.

③ PET printing layer

Ensure that the printed images are clear, colors are vibrant, and details are rich.

④ EVA foam adhesive

The product is designed to securely adhere to various surfaces in multiple environments, offering excellent durability to withstand prolonged use and various environmental conditions.

⑤ Backing paper

The primary purpose of backing paper is to protect the adhesive until the product is ready to be used. It prevents the adhesive from sticking to unwanted surfaces or getting contaminated before application.

① PET transparent protective film

② 3D PU gel

③ PET printing layer

④ EVA foam adhesive

⑤ Backing paper
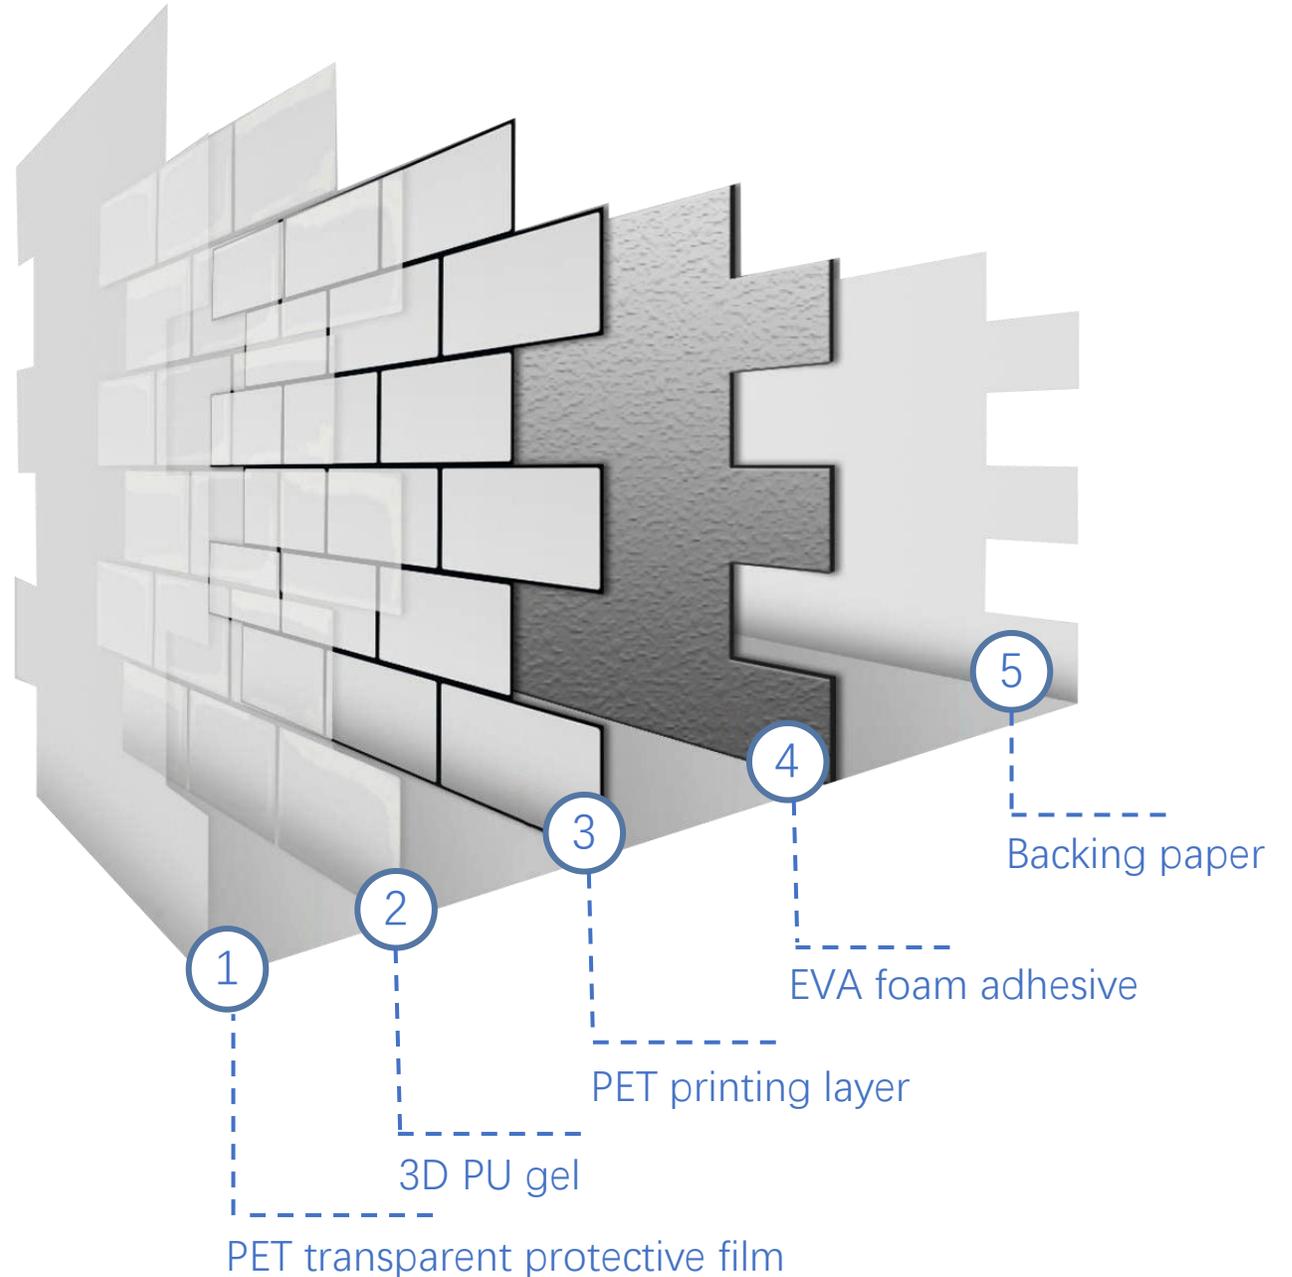

User Manual

1 Start by cleaning your wall to make it clean. Afterward, wait for the wall to dry. Note that the product is not suitable for use on damp surfaces

2 Begin by removing the transparent protective film from the front of the tile. Next, peel back the adhesive backing on the backside, leaving approximately 2 inches exposed.
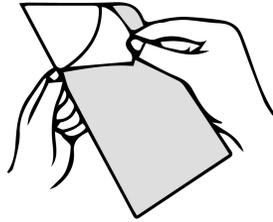

3 Stick it parallel and then peel off the remaining backing.
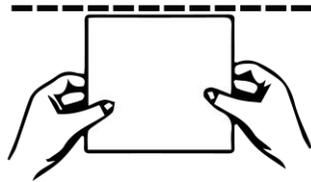

4 If your tile has the label 'Overlap here' please align the grout lines of the tiles and overlap them during the bonding process.
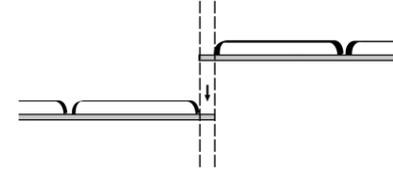

If your tile does not have the 'Overlap here' label, please do not overlap the grout lines. Align their borders directly during the pasting process

5 Trim away the excess and unwanted portions, and you're done!
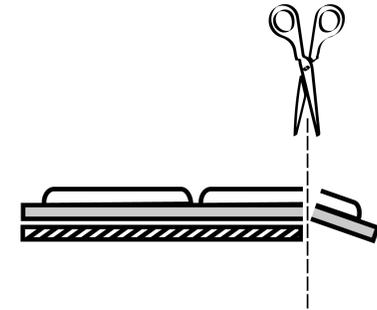

!
- They can be installed on any surface whose temperature does not exceed 49 °C (120 °F). Avoid any direct contact with a heat source or direct exposure to an open flame.
- Once tiles have completely adhered to the surface -generally after 48 hours - they are resistant to the humidity of bathrooms and water splash. However, it is highly inadvisable to install them in the shower.
